

Family Office Operating System Implementation Checklist

The specification reproduced in full and in its original order, with a box against every requirement. Ticked where it is built and reading a real source, half-filled where part of it works, empty where it is not built. 422 checkable requirements.

212 BUILT	54 PARTIAL	156 NOT BUILT	57% WEIGHTED
--------------	---------------	------------------	-----------------

HOW TO READ A BOX

- ☒ **Built.** Live on the dashboard, reading a real source, with its own provenance.
- ☐ **Partial.** Some of it works. The grey line underneath says exactly what is missing.
- ☐ **Not built.** Renders on screen as a named absence with its reason — never as a zero or a placeholder figure. The note says whether a source exists at all.

Two things about this reproduction. The source document repeats one long section verbatim — the cross-cutting requirements and all of Macro Research appear twice, identically. They are printed once here, because the same requirement carrying two separate tick states would make the checklist unusable.

The two investment-tracking tables are stored by Word one word per line ("Company / name / Sector CMP Buy price"...). They are reassembled into the columns the specification actually lists, and marked as such where they appear.

A Family Office Operating System (FOOS)

It is meant to compound knowledge, decisions and capital over decades. The system should answer 5 questions instantly:

☒ What do we own?

Portfolio Monitor, consolidated to ₹335.43 Cr with each dually-reported holding counted once

☒ Why do we own it?

Thesis & Triggers records why, expected return, risk and exit triggers per holding

☐ What has changed?

Morning CIO, news and corporate actions cover it; there is no automated thesis-change monitor

☐ What opportunities exist?

Watchlist, company compare, the macro store and a market-cap view of the book; still no screener ACROSS companies

☒ What should we do next?

Alerts fire on the family's own rules, and the Decisions Required queue is built on the Family Dashboard

LAYER 1 — KNOWLEDGE & MEMORY

Most important layer. Everything gets captured

SOURCES

☒ Manager meetings

☒ Fund pitches

☒ Product presentations

☒ Investment committee meetings

☒ External interactions

☒ Tax discussions

☒ Deal discussions

☒ Macro calls

☒ Conference notes

☒ Books

☒ Podcasts

☒ Research reports

AI query — the spec's worked examples

User Query → AI Output

☐ Show me every discussion we've had on small-cap valuations since 2024

Keyword and facet search over the family's own notes is what shipped, and the page says so in those words. It answers these three questions, which are searches — but it is not a language model reading an index

☐ What have our managers said about manufacturing since 2023?

☐ Which direct investments have highest exposure to AI theme?

☒ Every Note needs to be tagged.

Every note carries the spec's seven tag dimensions

☒ Asset Class, Geography, Theme , Source, Manager, Risk, Decision status - Watchlist, Approved, Invested, Exited. Research

Asset class, geography, theme, source, manager, risk and decision status — the pipeline runs Research → Watchlist → Approved → Invested → Exited

- Example : XYZ PMSTheme – SMID, Bucket – Groth, Liquidity – Moderate, Asset Class – Equity, Review Date Theme, asset class, IPS bucket and a review date are now note fields. Liquidity is not — it is a judgement per instrument that nothing here records

LAYER 2 - RESEARCH & INTELLIGENCE

Macro Intelligence

- Interest Rates , Inflation , Fiscal Deficit, Liquidity, Credit Growth, Money Supply, USD Index, Oil, Gold, Copper, Silver , etc
Rates, inflation, USD index, oil, gold, copper and silver are live. Fiscal deficit, liquidity, credit growth and money supply are not

Micro intelligence

- Stock prices, Corporate Actions, RSI , 200 DMA , ratios, Shareholding patterns
Stock prices and corporate actions are live; ratios and shareholding come back as prose. RSI and 200-DMA are not computed

Needs to be discussed in detail as this can be never ending.

- ☒ P&L History for last 10 yrs,
Parsed from the reported table — twelve year-ends for ABCAPITAL — and charted rather than passed through as text
- ☐ Block deals
No free source publishes block deals

The following functionality should be available across all research modules:

Data Visualisation

- ☒ Interactive price charts
Company pages draw the full daily close history
- ☒ Historical time-series charts
Every live series charts from the committed store
- ☒ Multiple chart types (line, bar, area, scatter)
All four types implemented
- ☒ Overlay multiple datasets on a single chart
Click any row on Macro Research to add it to the overlay; auto-rebases when units differ
- ☒ Ability to compare multiple securities or indicators
- ☒ Adjustable time periods

Historical Data

Wherever applicable, data should be available on:

- ☒ Daily
Daily series stored at native frequency
- ☒ Weekly
Any series resamples to Weekly; the open bucket is marked so a part-week is not read as a full one
- ☒ Monthly
- ☒ Quarterly
Quarterly resample, last observation in each bucket
- ☒ Year-end
Year-end resample; a year still running is flagged rather than shown as closed
- ☒ Maximum available history
S&P 500 to 1970, Pink Sheet commodities to 1960, DXY to 1971

Returns Table

Wherever applicable, provide:

- ☒ Daily Return
- ☒ Weekly Return
- ☒ Monthly Return
- ☒ Quarter-to-Date
- ☒ Year-to-Date
- ☒ 1 Year
- ☒ 3 Year CAGR
- ☒ 5 Year CAGR
- ☒ 10 Year CAGR
- ☒ Maximum Available CAGR
- ☒ 52 Week High
- ☒ 52 Week Low

Data Comparison

Users should be able to compare:

- ☒ Multiple commodities
- ☒ Multiple indices
- ☒ Multiple currencies
- ☒ Multiple companies
Up to four companies
- ☐ Multiple sectors
No sector-level comparison screen
- ☒ Multiple macro indicators

on a single screen.

Data Release Calendar

Each macro data series should contain:

- ☐ Release calendar
No free source publishes an Indian macro consensus, which the calendar and the surprise column both depend on
- ☐ Previous value
No free source publishes an Indian macro consensus, which the calendar and the surprise column both depend on
- ☐ Consensus estimate
No free source publishes an Indian macro consensus, which the calendar and the surprise column both depend on
- ☐ Actual release
No free source publishes an Indian macro consensus, which the calendar and the surprise column both depend on
- ☐ Surprise vs Consensus
No free source publishes an Indian macro consensus, which the calendar and the surprise column both depend on
- ☐ Historical releases
No free source publishes an Indian macro consensus, which the calendar and the surprise column both depend on
- ☐ AI-generated 2–3 line commentary explaining the latest release and its significance
No free source publishes an Indian macro consensus, which the calendar and the surprise column both depend on

Export Functionality

Users should be able to export:

- ☒ Data tables
Styled Excel workbook — all holdings plus the full transaction tape
- ☒ Charts
Chart PNG with a caption band carrying title, unit, source and as-of, so the image still says what it measures once it leaves the app
- ☒ Comparison tables
CSV alongside the Excel workbook; a null writes as an empty field, never 0
- ☒ Reports
PowerPoint review deck, seven slides
- ☒ into Excel, PDF and PowerPoint.
All three formats

A. MACRO RESEARCH

1. Commodities

- ☐ The system should provide historical prices, production statistics and trends for major commodities.
Prices are live for 26 of 31 commodities; production statistics are not carried for any

Energy

- ☒ Brent Crude
- ☒ WTI Crude
- ☒ Natural Gas
- ☒ LNG
Japan LNG, monthly
- ☐ Coking Coal
The Pink Sheet publishes thermal coal only. Needs Platts or Argus
- ☒ Thermal Coal
Newcastle benchmark, monthly
- ☒ Electricity Prices
IEX day-ahead, averaged across all 96 blocks

Metals

Precious Metals

- ☒ Gold
- ☒ Silver
- ☒ Platinum
- ☒ Palladium

Industrial Metals

- ☒ Copper
- ☒ Aluminium
- ☒ Zinc
- ☒ Nickel
- ☒ Lead
- ☒ Tin

☒ Steel

☒ Iron Ore

Agriculture

☒ Wheat

☒ Rice

☒ Corn

☒ Soybean

☒ Cotton

☒ Sugar

☒ Coffee

☒ Palm Oil

☒ Rubber

Others

☐ CRB Commodity Index

Refinitiv licenses the CRB. The Bloomberg Commodity Index is carried alongside under its own name, never as the CRB

☐ Baltic Dry Index

The Baltic Exchange licenses the BDI

☐ Rail Freight

Ministry of Railways publishes monthly as a PDF release

☐ Ocean Freight

Drewry and Freightos publish weekly on their own pages with no API

☐ Container Freight Index

Same as ocean freight

2. Global Equity Indices

☐ Historical data and composition for major indices.

Historical data is live for all twelve; composition is not carried for any

Examples:

☒ S&P 500

☒ Nasdaq

☒ Dow Jones

☒ Russell 2000

☒ FTSE

☒ DAX

☒ CAC

☒ Nikkei

☒ Hang Seng

☒ Shanghai Composite

☒ Nifty 50

☒ Sensex

Each index should include:

- ☒ Historical chart
- ☒ Returns
All twelve horizons plus the 52-week range
- ☐ Constituents
Index composition is licensed by the index providers
- ☐ Weightages
Licensed
- ☐ Sector allocation
Licensed
- ☐ Historical valuation
Needs constituent-level history
- ☐ Market Capitalisation
Licensed

3. Currencies

Historical exchange rates and comparison.

Examples

- ☒ USDINR
- ☒ EURUSD
- ☒ GBPUSD
- ☒ USDJPY
- ☒ USDCNY
- ☒ Dollar Index (DXY)

B. MACRO ECONOMIC INDICATORS

- ☐ Historical data, charts and AI commentary for:
Data and charts are live where a source exists; AI commentary is not built for any row

Economic Growth

- ☒ GDP
Annual, World Bank, 1960 onward
- ☐ GDP Components
No free source for the expenditure breakdown
- ☐ Industrial Production
History 2012–Feb 2023 is stored and charted. MoSPI stopped appending to the open-data resource, so there is no current reading
- ☐ PMI
S&P Global licenses the PMI
- ☐ Capacity Utilisation
RBI's OBICUS survey is PDF only

Inflation

- ☐ CPI
Annual only. No free source publishes the monthly headline CPI series
- ☐ Core CPI

☒ WPI

History 2012–Oct 2023 is stored. The source stopped appending; verified against its own declared schema

☐ Rural Inflation

The state-level rural/urban series ends December 2022

☐ Urban Inflation

Same source, same cut-off

Labour Market

☒ Unemployment Rate

Annual

☐ Youth Unemployment

☐ Labour Participation Rate

PLFS publishes as survey rounds, not a series

☐ Non-Farm Payrolls

US series; not wired

☐ Wage Growth

Government

☐ Fiscal Deficit

Published in the Budget documents, not as a data feed

☒ Government Debt / GDP

Annual

☐ Tax Collections

☐ GST Collections

The open-data resource is a fixed table ending FY2023-24

☐ E-way Bills

Consumption

☐ Fuel Consumption

PPAC publishes monthly and CURRENT, but as PDF only — it needs a reader for that report's layout

☐ Airline Traffic

☐ Rail Freight

☐ Port Traffic

☐ Power Consumption

Power CAPACITY is carried from CEA; consumption is a different measure and is not

C. FIXED INCOME & CREDIT

Historical data for:

Government Bonds

☒ India 10 Year

Monthly, 2011 onward, OECD via FRED. The daily RBI benchmark still needs a reader

☒ US 10 Year

Daily, CBOE ^TNX

☒ Yield Curve

Drawn from the four stored Treasury tenors against the same date a year earlier. The 2-year is not carried, so the 10Y-2Y spread is named as absent and 10Y-3M shown in its place

Corporate Debt

- ☐ Corporate Bond Issuances
- ☐ Commercial Paper
- ☐ Certificates of Deposit
- ☐ Securitisation

Credit Markets

- ☒ Credit Spreads
 - US ICE BofA option-adjusted spread only, and labelled as US. India has no free equivalent
- ☐ Bond Ratings
 - The rating agencies license their data
- ☒ Yield Curves
 - Same curve component, rendered under Credit Markets as the spec asks

D. BANKING & FINANCIAL SYSTEM

Historical data for:

Policy Rates

- ☒ Repo Rate
- ☒ Reverse Repo
- ☒ Bank Rate
- ☒ CRR
- ☒ SLR

Credit Growth

Ability to analyse credit growth by:

- ☐ Banks
 - RBI publishes credit growth in the weekly statistical supplement, as PDF
- ☐ NBFCs
 - RBI publishes credit growth in the weekly statistical supplement, as PDF
- ☐ PSBs
 - RBI publishes credit growth in the weekly statistical supplement, as PDF
- ☐ Private Banks
 - RBI publishes credit growth in the weekly statistical supplement, as PDF

Further classification into

- ☐ Retail
 - Same source, same format
- ☐ Corporate
 - Same source, same format
- ☐ MSME
 - Same source, same format
- ☐ Agriculture
 - Same source, same format
- ☐ Housing
 - Same source, same format

☐ Services
Same source, same format

☐ PSL
Same source, same format

E. HOUSING

Historical data for

☐ House Price Index
The only free house-price series ends March 2013

☐ Housing Affordability
The only free house-price series ends March 2013

☐ Registrations
The only free house-price series ends March 2013

☐ Commercial Rentals
The only free house-price series ends March 2013

☐ Residential Rentals
The only free house-price series ends March 2013

☐ Inventory Levels
The only free house-price series ends March 2013

Ability to drill down to:

☐ City

☐ Micro Market

F. HOUSEHOLD

Historical data for

☐ Household Debt / GDP
RBI publishes household financial savings annually in its Handbook, as PDF

☐ Household Financial Savings
RBI publishes household financial savings annually in its Handbook, as PDF

☐ Household Physical Savings
RBI publishes household financial savings annually in its Handbook, as PDF

☐ Financial Asset Mix
RBI publishes household financial savings annually in its Handbook, as PDF

G. CONSUMPTION

Vehicle Sales

☐ Passenger Vehicles
SIAM puts production and sales behind a member subscription — a commercial licence, not a reader

☐ Two Wheelers
SIAM puts production and sales behind a member subscription — a commercial licence, not a reader

☐ Commercial Vehicles
SIAM puts production and sales behind a member subscription — a commercial licence, not a reader

☐ Tractors
SIAM puts production and sales behind a member subscription — a commercial licence, not a reader

Consumer

- ☐ Consumer Durables
- ☐ FMCG Volumes
- ☐ Retail Spending

H. CAPITAL MARKETS

Historical data for

- ☐ Mutual Fund Flows
AMFI publishes ~100 monthly reports back to 2018 in legacy .xls — wiring these from your other dashboard is the plan
- ☐ SIP Flows
Same AMFI source
- ☐ Folios
Same AMFI source
- ☐ ETF Flows
- ☐ Demat Accounts
- ☐ Active Trading Accounts
- ☐ Exchange Volumes
NSE and BSE publish daily but under terms of use that need checking
- ☐ F&O Turnover
Same

INDUSTRY RESEARCH

Each industry should have a dedicated dashboard containing:

Industry Structure

- ☐ Industry Size
- ☐ Growth Rate
- ☒ Capacity
Live for electricity — CEA's monthly workbook feeds seven capacity series. Coal and steel capacity are PDF-only
- ☐ Capacity Utilisation
CEA publishes PLF in the generation report, a different document with its own layout
- ☐ Order Book
Order books are disclosed per company, never as an industry aggregate
- ☐ Order Inflows
Same

Industry Economics

- ☒ Raw Material Prices
Seven industry dashboards, each declaring which stored series are its inputs
- ☒ Input Cost Trends
With returns and a rebased basket chart per industry
- ☐ Realisations
A realisation is revenue over volume — both company disclosures
- ☐ Pricing Power
Same
- ☒ Capacity Additions
Derivable from the CEA capacity series once the store has accumulated several months

Examples:

☐ Cement (Region-wise)

National input costs are live; the region-wise split is published only by paid research

☒ Steel

Iron ore, HRC, zinc and power

☐ PVC Resin

Crude and gas feedstocks are live; PVC resin itself is priced by ICIS under licence

☒ Fertilisers

Urea, DAP, phosphate rock, potash and gas

☒ Coal

Newcastle benchmark and demand-side power price

☒ Electricity

Spot price, fuels and now installed capacity

☒ Crude Derivatives

Brent, WTI and natural gas

Industry Intelligence

☐ Industry News

☐ Government Policies

☐ Industry Reports

☐ AI-generated Industry Summary

COMPANY RESEARCH

Each listed company should have a dedicated research page.

Documents

Repository of

☒ Annual Reports

From the filings feed, with source links

☒ Quarterly Reports

☐ Investor Presentations

Appears when the filings feed carries it

☐ Earnings Call Transcripts

Same

☐ Credit Rating Reports

The rating agencies license these

☐ Broker Reports

Broker research is licensed

☒ Corporate Announcements

Each document should include:

☐ AI Summary

☐ Key Takeaways

☐ Searchable Content

Documents are listed and linked; their contents are not indexed for search

☒ Source Link

Financial Statements

☒ Historical financials (maximum available history)

Read by row label from the reported tables; the source's own label is shown beside each metric so a figure traces back

☒ Quarterly P&L

Quarterly Results parsed as a table

☒ Annual P&L

Profit & Loss parsed as a table, twelve year-ends deep

☒ Balance Sheet

Parsed as a table

☐ Cash Flow Statement

The financials response carries NO cash-flow section — checked against the live API on 2026-08-11, not assumed

☐ Consensus estimates for next 2–3 years.

Returned as prose, same caveat

Business Segments

☐ Revenue by Segment

☐ EBIT by Segment

☐ Geography-wise Revenue

☐ Product-wise Revenue

Operating Metrics

☐ Sector-specific KPIs

No source carries sector-specific KPIs

Examples

☐ Volume

☐ Capacity

☐ Utilisation

☐ ARPU

☐ Subscribers

☐ Branches

☐ Store Count

Market Data

Current

☒ Share Price

Live quote

☒ Market Capitalisation

☐ Enterprise Value

☐ Shares Outstanding

☐ Fully Diluted Shares

☐ Book Value

☐ Face Value

Returns

☒ 1 Day

☒ 1 Week

☒ 1 Month

☒ 6 Month

☒ YTD

☒ 1 Year

☒ 3 Year

☒ 5 Year

☒ 10 Year

☒ Max Available

☒ 52 Week High/Low

Financial Ratios

☐ Minimum 10-year history.

The ratio endpoint returns current values as prose, not a ten-year series

Valuation

☐ PE

Current value in the prose block

☐ PB

Current value in the prose block

☐ PS

Current value in the prose block

☐ EV/EBITDA

Current value in the prose block

☐ Dividend Yield

Current value in the prose block

☐ FCF Yield

☐ Buyback Yield

☐ Historical valuation on any selected date.

Needs the ten-year ratio series first

Growth

☒ Revenue Growth

Year-on-year and compound, from the reported P&L

☐ EBITDA Growth

Computed where the company reports an operating-profit line. A lender reports Financing Profit and no EBITDA, and no house schema maps one onto the other

☒ EPS Growth

Year-on-year and compound, from the reported P&L

☒ CAGR Analysis

Full-span and 5-year CAGR per metric, null wherever the arithmetic would lie — one point, a span under a year, or a start at or below zero

Margins

☐ Gross Margin

In the prose block

☐ EBITDA Margin

In the prose block

☒ **Operating Margin**

In the prose block

☒ **Net Margin**

In the prose block

Including:

☒ **Reported**

Reported figures only

☐ **Adjusted (excluding exceptional items)**

No adjusted series

Working Capital

☒ **Inventory Days**

In the prose block

☒ **Receivable Days**

In the prose block

☒ **Payable Days**

In the prose block

☒ **Cash Conversion Cycle**

In the prose block

☒ **Working Capital Cycle**

In the prose block

Returns

☒ **ROE**

In the prose block

☒ **ROCE**

In the prose block

☒ **ROA**

In the prose block

☐ **DuPont Analysis**

Needs the components as structured data

Other Metrics

☒ **Effective Tax Rate**

In the prose block

☐ **Related Party Transactions**

☒ **Promoter Holding**

Current holding only

☒ **Shareholding Pattern (10+ years)**

Current pattern only, not ten years

☐ **Bulk Deals**

☐ **Block Deals**

☐ **Ability to search shareholders holding more than a specified percentage.**

Needs the shareholding register as structured data

Value Chain

Display:

☐ **Major Customers**

- ☐ Major Suppliers
- ☐ Revenue Concentration
- ☐ Raw Material Mix

Comparison

- ☒ Compare up to four companies across:

Up to four companies on one screen

- ☐ Financials
Needs structured financials

- ☐ Ratios
Needs structured ratios

- ☐ Valuation
Needs structured ratios

- ☒ Returns
All horizons compared

- ☐ Operating Metrics

- ☐ Shareholding

- ☐ Capital Allocation

AI Query Engine

Natural language queries such as:

- ☐ Compare branch expansion of HDFC Bank and ICICI Bank over the last 10 years.

Each of these needs structured, multi-company, multi-year data the book does not hold

- ☐ Show companies with improving ROCE and declining leverage.

Each of these needs structured, multi-company, multi-year data the book does not hold

- ☐ Compare steel companies on capacity utilisation.

Each of these needs structured, multi-company, multi-year data the book does not hold

- ☐ List companies with promoter buying over the last five years.

Each of these needs structured, multi-company, multi-year data the book does not hold

Investment Tools

- ☒ Personal Watchlist

- ☒ Target Price

An unset target is blank, never zero

- ☒ Fair Value

- ☒ Entry Price

- ☒ Exit Price

- ☒ Price Alerts

Price-level rules; a rule whose inputs are incomplete reports unmeasurable rather than passing

- ☐ Earnings Calendar

- ☐ Meeting Calendar

- ☒ Management Meeting History

Captured as Knowledge notes, not as a company-page timeline

Export

Allow export of:

☒ Financial Data

☒ Charts

Chart PNG, captioned

☒ Comparison Tables

CSV export

☒ Reports

PowerPoint deck

☐ AI Summaries

☐ Excel Models

Dashboard for tracking public investments

For private investments

Need dashboard for tracking investments in the below format

☒ Amount invested - Investment by tranches and date when you click on amount invested

Tranche list per deal, each with its date. Amount invested is their SUM and cannot be typed

☒ Documents - List of documents and attachments when you double click on documents

Documents are REGISTERED — what a document is, its date and where it lives. The files stay in the family's own store; a browser is the wrong home for signed PDFs, and the page says so

☒ Valuation - Valuation at which the last investment was made by us

Last-round post-money and its date, entered per deal

☒ Stake acquired - Stake % acquired in the company on fully diluted basis at the time of investment

Fully-diluted stake at entry, and post-raise separately, so dilution is visible

☒ Subsequent rounds - If answer is Yes, double click should have Valuation, Investors, amount invested, cap table for each subsequent round and dates of each primary and secondary transactions

Per-round name, date, post-money, investors, amount invested, primary/secondary and cap table

☐ Financials - Double click should show quarterly / annual financials / operating KPIs

The register records which financials exist and as of when; the quarterly and annual TABLES for a private company are not available from any source

☐ MIS - To be saved as attachments

MIS packs are registered with their dates; the attachments themselves are not stored

Dashboard for tracking public investments

The column list below is reassembled from the source table, which Word stores one word per line.

☒ Company name

☒ Sector

☒ CMP

Live where a quote resolves; the statement mark otherwise, flagged as not live

☒ Buy price

☒ Current absolute % return on buy price

☒ Amount invested

☒ Current value

☒ Absolute gain

☐ XIRR

Per ACCOUNT, not per security — a per-security rate needs every lot from first purchase, and these statements cover the current period only

☒ Quantity bought

☒ Weight in portfolio

Consolidated, so the column sums to 100

☒ Target absolute amount

The family's per-unit target times the quantity actually held

☒ Target weight in portfolio

Recorded per name. 0% is a real instruction — hold none of this — and is stored as one, distinct from unset

☒ Pending amount to be invested

target% x book total - held now, with the denominator named in a footnote since it is not visible from the cell

☒ Fair value

Family input on the watchlist; blank when unset, never zero

☒ Fair value reference year

Recorded per name, so a fair value carries the horizon it was struck for

☒ Valuation methodology

Recorded per name by a human, with a suggestion list to keep spelling consistent. Never cycled by row order again

Dashboard for tracking private investments

☒ Company Name

☒ Amount Committed

From the drawdown fund capital accounts

☒ Date Committed

Entered on the deal

☒ Amount Invested

Drawn capital

☒ Investment date

First and last drawdown, derived from the tranche dates

☒ Pending amount to be invested by us

Undrawn commitment — ₹75 L per trust

☒ Documents

Registered with kind, date and location; the files stay in the family's own store

☒ Valuation

Last-round post-money, entered per deal

☒ Stake Acquired

Fully-diluted stake at entry

☒ Cap Table at Entry

Entered per deal, and per round thereafter

☒ Subsequent Rounds

Full round history — name, date, post-money, investors, primary/secondary

☒ Value of our stake post last fund raise

DERIVED: post-raise stake x that round's post-money. Both sides required or it is absent

☒ Our stake % in the company post latest fund raise

Entered per deal, so dilution against the entry stake is visible

☐ Financials

Which financials exist and as of when; not the tables themselves

☐ MIS Latest

Registered with its date; the attachment itself is not stored

- ☒ MIS received from company — date
Derived from the newest registered MIS document
-

LAYER 3 - PORTFOLIO & EXPOSURE LAYER

- ☒ One page on family charter , the decision making framework.
Free-text charter on Exposure & IPS
-

As per IPS buckets:

- ☒ Growth - LiquidityTacticalHedgeCharity
All five buckets
 - ☒ Followed by GAP Analysis
A gap needs both halves; where a target is unset the cell is blank, never a gap against zero
-

Exposure – assets – actual vs desired

- ☐ Geography
Nothing in the model records where a company is listed or earns. Needs a country field at ingest or a look-through into each fund's holdings
 - ☒ Marketcap
Live from the quote feed, whose marketCap was verified as RUPEES against screener.in (0.05% apart). Bands are a DECLARED convention, stated on screen, not SEBI's rank-based classification
 - ☐ Duration
No liquidity horizon is recorded against any holding. Assigning one by asset class would be a classification nobody made
 - ☒ Tangible vs Intangible
Follows from each asset's KIND rather than a per-row judgement, so two rows describing the same sort of asset cannot disagree
 - ☒ Sector
Sector Composition, listed book
 - ☐ Stocks / Securities
Per-security exposure is live; a per-security target is not a family input yet
 - ☒ Entity wise
Family & Entities
 - ☐ Advisor allocation (if any) – advisor performance
Advisor register carries who, on what mandate, at what fee and when next reviewed. Advisor PERFORMANCE is not attributed — no statement maps a return to an adviser
 - ☒ Transactions tab (with actual docs as link)
Each figure links to its own source document
 - ☒ Top 10 holdings, Top 10 sectors
 - ☒ Data in INR crores or Dollars
Compact suffixes follow the selected currency
 - ☐ How portfolio value moved MOM, QOQ, YOY
Two dated values per account is not a series — needs a periodic valuation statement
 - ☒ Attribution – Laggards, Contributors
Return & Drawdown
-

Chart for monthwise :

- ☐ Calls on funds expected (Fund invested)
Commitments are carried; the fund publishes no call schedule
 - ☐ Tax liability expected
Estimated where a capital gain statement exists — 7 of 23 accounts
-

LAYER 4 – MONITOR & DECISION MAKING LAYER

- ☐ Why invested? Expected return? Risk? Exit triggers? Who proposed? Date? Meeting notes? Review schedule? FM change? Style changes?

Eight of the ten are live: why, expected return, risk, exit triggers, who proposed, date, meeting notes and review schedule.
FM change and style drift need a source, not a threshold

- ☒ Stop loss for stocks atleast monitor.

Price-level rules

- ☐ AI prompt – If any of the above thesis change significantly. It should monitor and highlight.

Needs a language model over the thesis store

LAYER 5 – ALERT SYSTEM

Examples

- ☒ IPS Alert - Growth bucket exceeds max allocation

Evaluated against the family's IPS targets

- ☐ Liquidity Alert - 7-day liquidity falls below threshold

Needs a liquidity definition and a cash position the book does not hold

- ☐ Manager Alert - FM resigned, Style drift, AUM exploded

Needs a manager-monitoring source

- ☐ Macro Alert - India liquidity cycle deteriorating

Needs a macro rules engine

- ☐ Private Investment Alert - Capital call due, Board meeting pending

The fund publishes no call schedule or board calendar

- ☐ New Investment Proposed Alert – Fresh commitments to go through approval process, to be monitored basis our liquidity situation.

Needs an approval workflow

LAYER 6 - FAMILY DASHBOARD

- ☒ For per family member and as an entire family as well

Every tile scopes to the selected member; a register line attributed to nobody counts only in the whole-family view rather than being split

- ☒ Net Worth

Measured portfolio + entered off-book assets - liabilities. The caption says how many register lines it spans, so a net worth over one bank balance cannot read as a complete one

- ☒ Portfolio Value

₹335.43 Cr consolidated

- ☒ Cash Available

Sum of the balance-sheet lines marked liquid

- ☒ Liquidity Coverage

Cash over the committed-outflow schedule, in months. Needs BOTH halves — cash with no schedule is not unlimited coverage

- ☐ Annual Return

Money-weighted, covering the 6 of 23 accounts whose statements carry an opening value — the other 17 are named

- ☒ Benchmark Return

The family picks a series from the harvest store; nothing is chosen by default, because defaulting to the Nifty would put a comparison on screen nobody agreed to on a book that is 62% private

- ☒ Charity Pool

Assets the family ring-fences for charity

- ☐ Upcoming Capital Calls

Undrawn commitments are carried; their dates are not published by the fund

☒ Upcoming Commitments

₹75 L per trust, from the drawdown fund statements

☒ Buckets - Growth / Liquidity / Tactical / HedgePublic / PrivateTop 10 Exposures

Buckets, public/private split and top exposures

☒ Decisions Required

A real queue with category, owner, due date and state. Nothing generates an item — an empty queue says nothing has been ENTERED, which is not the claim that nothing is outstanding

Checked against the dashboard at commit **53767f3** · 422 requirements · 212 built, 54 partial, 156 not built. Every “not built” item renders on screen as a named absence with its reason; none is shown as zero.
